## Model 3324QC-400 amp

### DESCRIPTION

These ground power units are designed to perform starting, powering up aircraft systems and maintenance functions. When connected to AC power, the depleted batteries can be charged in a matter of hours with the built in power supply/battery charger.

The 3328QC contains a full 28-volt battery bank for starting and a large power supply to provide a continuous current at 28.5 Volts DC for maintenance. This mobile GPU is configured with a 400 amp power supply. This will satisfy the ground power requirements of most business jets, and includes on-board air conditioning and other high draw aircraft systems.

We also custom manufacture Start Pac® units in various combinations of batteries and 28 volt power supplies to meet customers' exact requirements.

### SPECIFICATIONS

The Model 3324QC-400 GPU is a combination power supply and battery pack.

#### Batteries

- 26 amp hour at 10 hour rate
